

## Accessing the admin panel

The WP-Admin dashboard is where you can manage your website settings, content, and more.

1

### Scan WordFence QR code

I installed WordFence because I wanted to improve the websites security, one of the features given with the free version of WordFence is 2FA, this step is crucial to login to our website.

Dont know what to do with the QR code? :

I recommend using Google Authenticator as its very easy to use.

2

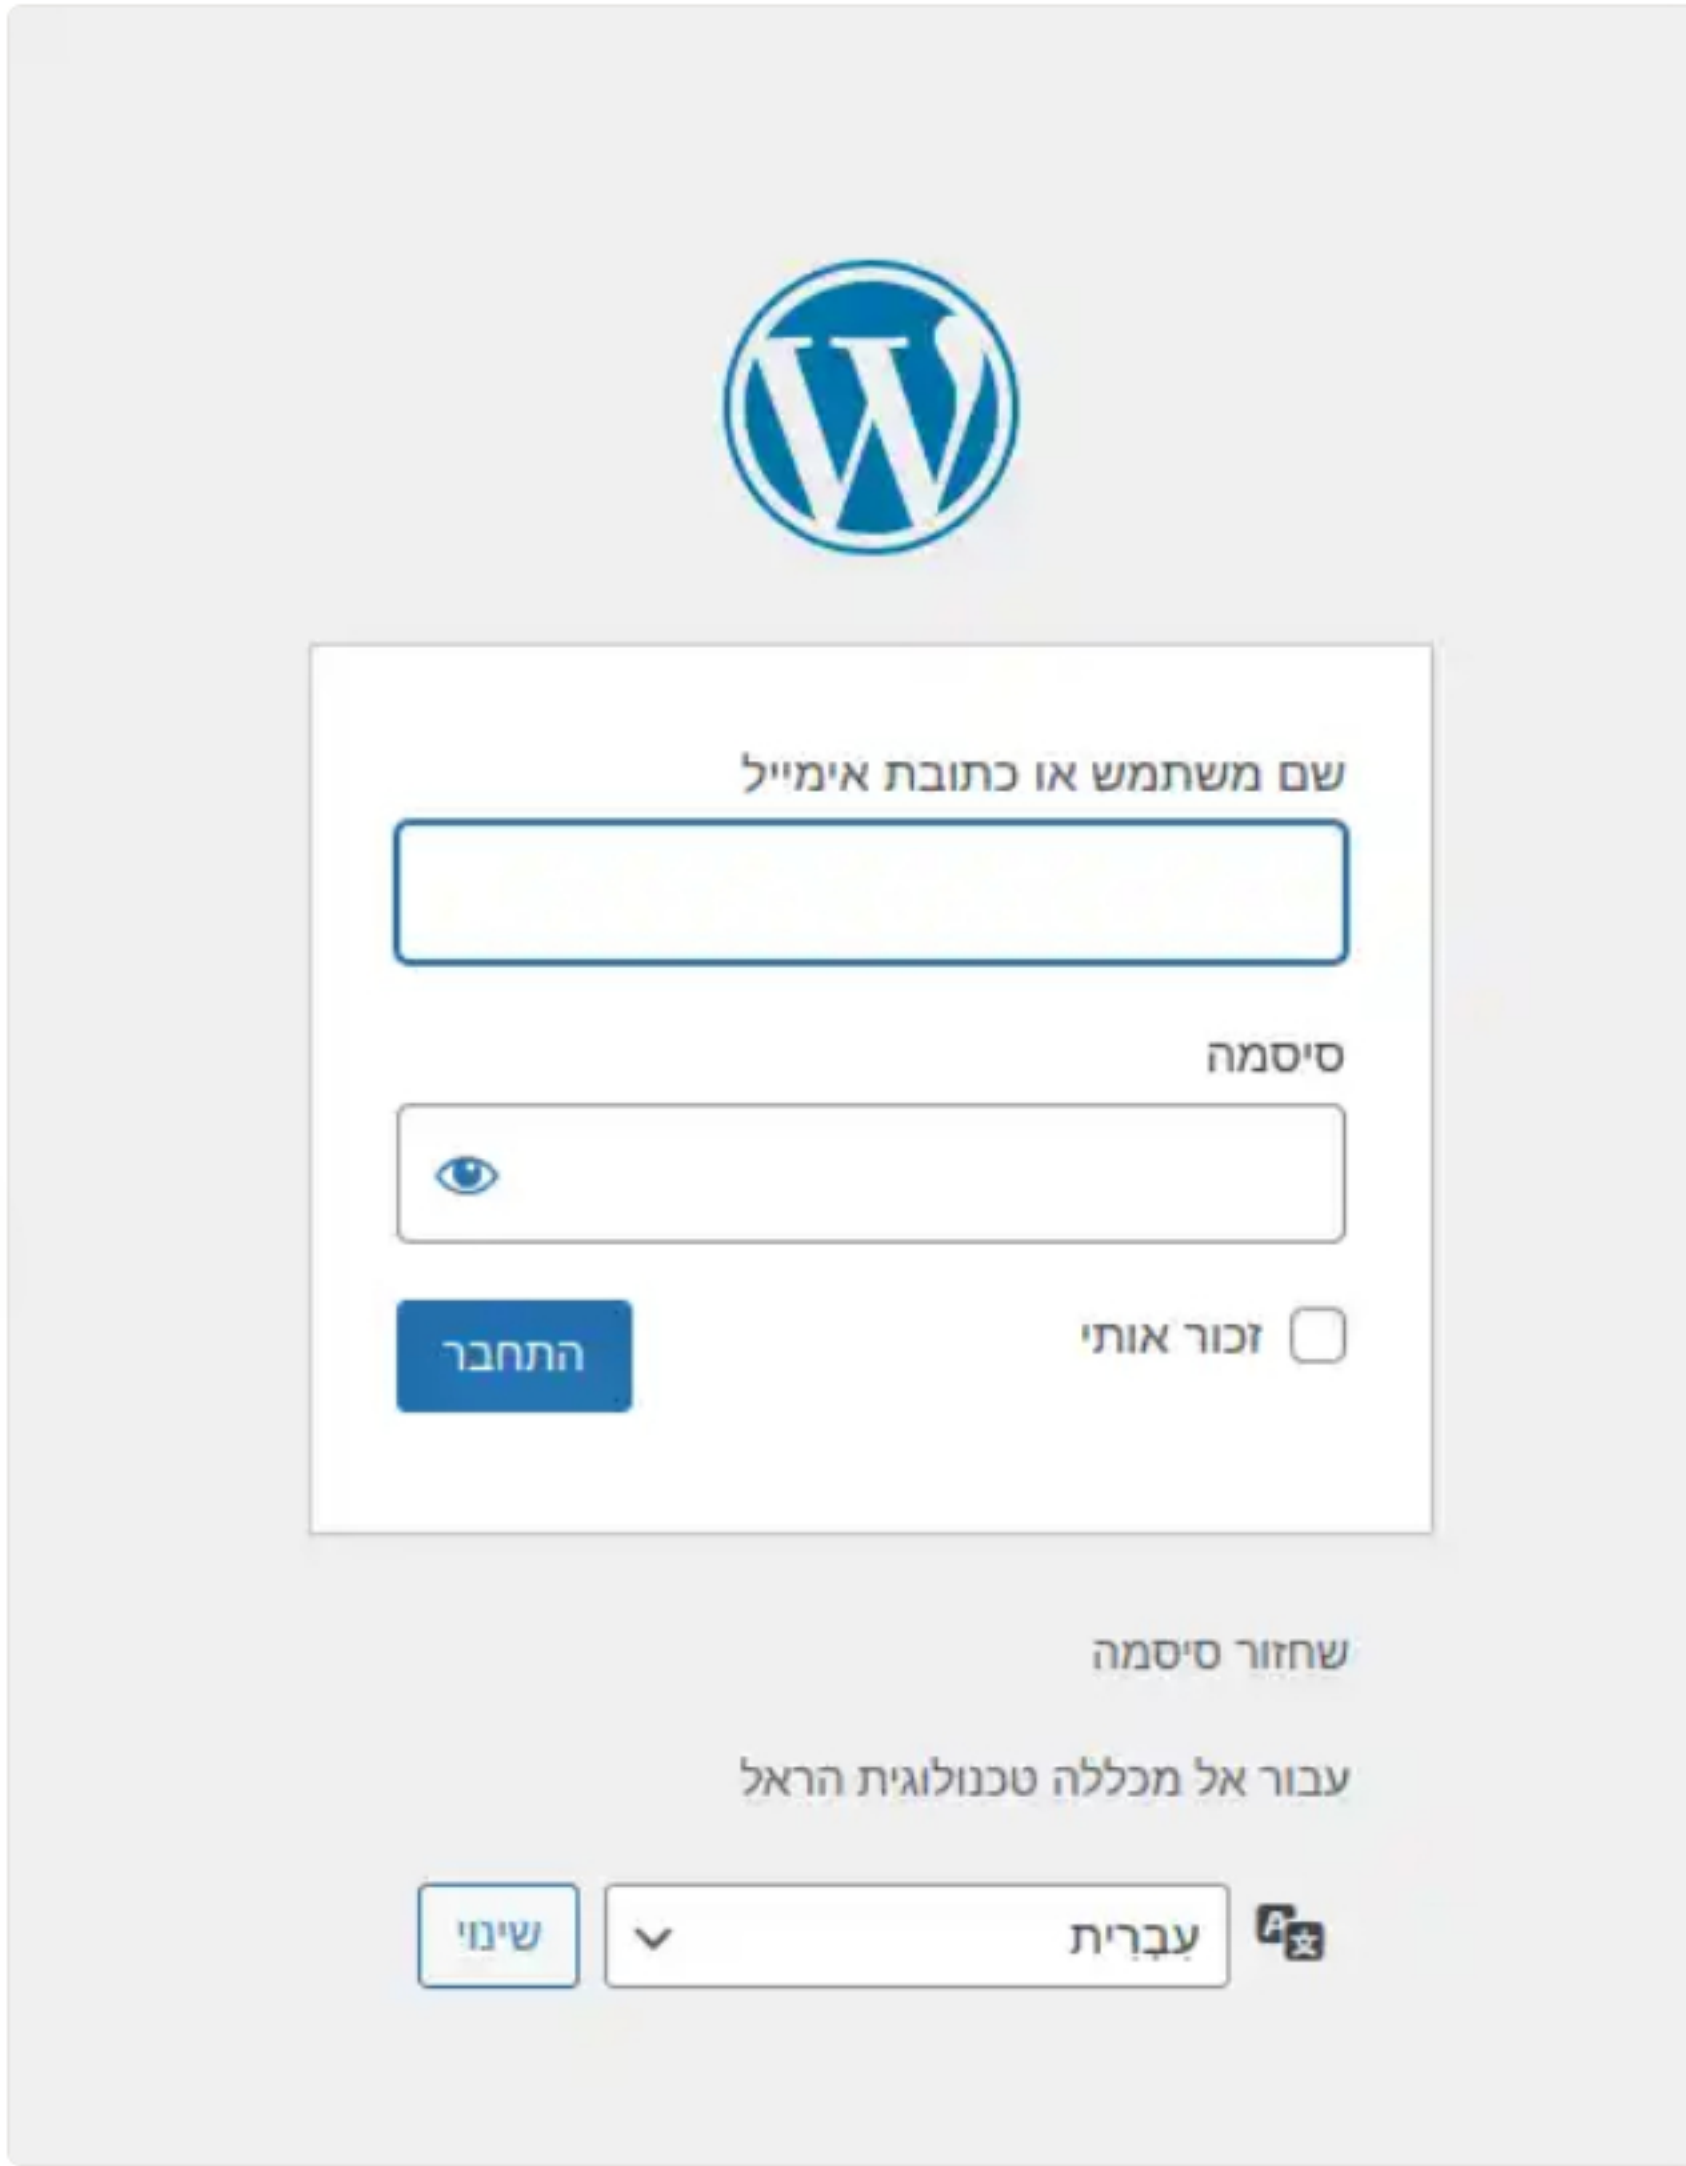

### Obtain the login URL

Another free feature of WordFence is *custom login url*, hence you would have to ask someone how already knows the url for it. (e.g. Noam or Shay)

⚡3

### Login

After entering the *login url* you should get a page similar to this:

Enter the username and password, the you should be asked for the 2FA code:

Enter the code from your authenticator app, and your good to go!
